SUMMARY

Product engineer who ships end-to-end and owns the product decisions behind the code. Built and launched two consumer products solo — a two-sided services marketplace (40+ categories, \$10K pre-seed) and a mental-health app (95+ users, 50% retention) — across web, native iOS/Android, and in-shop hardware. Comfortable owning the whole loop: talking to users, making the product call, then building, deploying, and supporting it in production. AI-native workflow to move at founder speed.

EXPERIENCE

Founder & Product Engineer, Bontro

Jan 2026 – Present

Remote · zero-commission booking & payments platform · \$10,000 pre-seed secured

- Architected and shipped a production multi-tenant SaaS platform solo — Next.js, TypeScript, PostgreSQL/Drizzle, Stripe Connect — spanning web, native iOS/Android (React Native/Expo), and a PIN-gated in-shop kiosk with Stripe Terminal.
- Owned product strategy end-to-end: defined a three-tier pricing model (Free/\$19/\$49) and sponsored-placement ad system through competitive research on incumbent platforms, optimizing tiers for high-volume categories.
- Built activation and churn-risk funnels with per-pro outreach tracking, plus PostHog full-funnel instrumentation (per-business cohorts, impression → click → booking conversion) — using the data to prioritize the roadmap.
- Shipped a finance surface tracking MRR movement, ARR run-rate, and growth projections used to model milestones and support the raise.
- Hardened for production: migrated SMS from Twilio to Telnyx (TCPA-compliant opt-out, Ed25519 webhook verification), enabled point-in-time recovery, and maintained 1,500+ automated tests across web (Vitest) and mobile (Jest) suites.

Product Engineer, One More Day

Jun 2025 – Present

Remote · peer-support mobile app

- Designed and built a dual-layer AI moderation pipeline (keyword + OpenAI) and a COPPA-compliant onboarding flow, owning the product call to make user safety a hard requirement — reached 95+ active users at 50% retention.
- Architected a 15-table PostgreSQL schema across users, content, moderation, and audit systems; built a crisis-detection hook triggering a non-dismissable intervention overlay.
- Shipped a full admin/moderation toolset (ban / mute / warn, audit logging) and a daily re-engagement notification loop to protect community health and retention.

Software Engineer Intern, Medidata Solutions

May 2025 – Aug 2025

New York, NY

- Collaborated with 10+ engineers and led architecture decisions for an internal analytics app built for C-suite executives.
- Designed and deployed 3 interactive dashboards visualizing automated-testing data, improving QA decision-making efficiency by 25%; integrated Immich facial recognition to auto-categorize 10,000+ media assets.
- Authored API integration documentation that improved developer productivity by 30% through standardized processes.

PROJECTS

Bach-Style Music Generation with AI

Nov 2024 – Dec 2024

Python · TensorFlow · LSTM · MuseScore · Google Colab

- Trained an LSTM network on 300+ tokenized MIDI compositions to learn Bach's harmonic patterns and generate original baroque sequences; evaluated output through music-theory analysis of generated chord progressions.

SKILLS

Languages & Frameworks: TypeScript · JavaScript · Python · Java · React · Next.js · React Native / Expo · Flask · Tailwind · Drizzle ORM

Platforms & Data: PostgreSQL (Neon) · Stripe Connect & Terminal · REST APIs · OpenAI API · Telnyx · Vercel · PostHog · Sentry · Vitest / Jest · Git

Product: Product discovery · competitive research · pricing & monetization · roadmap prioritization · activation / retention / conversion funnels · customer-facing deployment & support

EDUCATION

B.S. Computer Science, Saint Joseph's University · Minor: Data Science

Aug 2022 – May 2026

Relevant coursework: Data Structures & Algorithms, Artificial Intelligence, Database Management, Software Engineering, Internet Application Development.
