EDUCATION

Bachelor of Science in Computer Science, Saint Joseph's University

08/2022 – 05/2026

Minor: Data Science · Philadelphia, PA

Relevant Coursework: Data Structures & Algorithms, Artificial Intelligence, Database Management, Software Engineering, Ethical Hacking, Network Forensics, Internet App Development

TECHNICAL SKILLS

Languages — Java, Python, JavaScript, TypeScript, HTML, CSS

Frameworks & Libraries — React, Next.js, Flask, Tailwind CSS, Drizzle ORM, shadcn/ui, TensorFlow

Tools & Platforms — Git, Vercel, Microsoft Azure, Stripe Connect, Clerk, OneSignal, Resend, Twilio, JIRA, Google Colab

Databases — PostgreSQL (Vercel Postgres, Neon), Microsoft Azure SQL, MongoDB

APIs & Integration — REST APIs, Stripe Connect, NextAuth v5, Gmail API, ReportPortal API, Immich API, OpenAI API

Testing — Vitest (unit, API logic, Postgres integration)

PROFESSIONAL EXPERIENCE

Founder & Software Engineer, BookBetter

01/2026 – Present

Remote

- Architected and launched a production multi-tenant SaaS booking platform for independent service professionals (barbers, tattoo artists, massage therapists, nail salons) as sole developer, designer, and product owner
- Implemented Stripe Connect pass-through payments with deposit logic, card-on-file via SetupIntent, and cancellation fee charging — zero marketplace commission model
- Built multi-tenant subdomain routing, white-label branding, per-staff availability calendars, and a waitlist system; integrated Resend (email) and Twilio (SMS) notification pipelines with configurable per-event preferences
- Shipped 153 automated tests across unit, API logic, and real Postgres integration test suites using Vitest
- Designed and launched a sponsored marketplace listing feature generating direct platform revenue (\$29–\$79/placement)

Founder & Software Engineer, One More Day

06/2025 – Present

Remote

- Architected a 15-table PostgreSQL schema across users, content, moderation, badges, and audit systems; built dual-layer content moderation pipeline combining keyword filtering with OpenAI API semantic analysis
- Built COPPA-compliant onboarding with age verification, Clerk OAuth, and a crisis detection hook that triggers a non-dismissable intervention overlay — deployed to 95+ active users with 50% retention
- Developed full admin and moderation system with ban/mute/warn controls, audit logging, and a Vercel cron job pushing daily reminders via OneSignal REST API

Software Engineer Intern, Medidata Solutions

05/2025 – 08/2025

New York, New York

- Collaborated with 10+ engineers and led architecture decisions for an internal React web application built for C-suite executives
- Designed and deployed 3 interactive dashboards in ReportPortal to visualize automated testing data, improving QA decision-making efficiency by 25%
- Integrated Immich's facial recognition system into a React-based web app, automating categorization and management of 10,000+ media assets
- Authored internal API integration documentation improving developer productivity by 30% through standardized processes

IT Support Technician, Saint Joseph's University

06/2024 – Present

Philadelphia, Pennsylvania

- Manage Microsoft Azure database of 19,000+ student records; resolve 20+ hardware/software issues weekly with 24-hour average resolution time

PROJECTS

Luxury Tattoo

06/2025

JavaScript, React, Node.js, PostgreSQL

- Built a full-stack booking platform for tattoo artists with artist portfolio management, appointment scheduling, and payment integration
- Designed client-facing artist profile pages with gallery display and a booking flow supporting deposits and appointment confirmation

Bach-Style Music Generation with AI

11/2024 – 12/2024

Python, TensorFlow, LSTM, MuseScore, Google Colab

- Trained an LSTM neural network on tokenized classical MIDI compositions to learn Bach's harmonic patterns and generate original baroque-style sequences
- Preprocessed and tokenized 30+ MIDI files using MuseScore; evaluated output quality through music theory analysis of generated chord progressions
